INNOVATION I

BONITO BOTS

Robot Pickers for Warehouse Processes

BONITO *Bots*

Order is sent to the fulfilment center

Invoice is generated for tracking and record-keeping

IMS check item availability & initiate picking process

Communicates with the fulfilment centre

Robots pick items for shipping

AGVs & AMRs equipped with an RFID reader receive and respond to radio waves & bring items to picking area

Transport the packages to designated shipping area

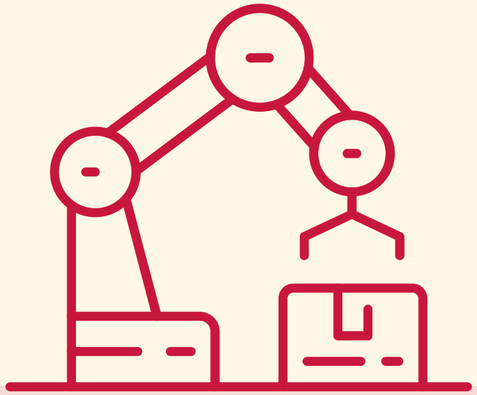

Sortation bots group items by destination or order type. Once the items are packed, Conveyor systems transport packages to shipping area

IMS : Inventory Management System
AGV : Automated Guided Vehicle

BONITO *Bots*

Automated Guided Vehicles & Automated Mobile Robots

Precision, Agility, and Efficiency in warehouse operations,
from seamless transport to real-time adaptability

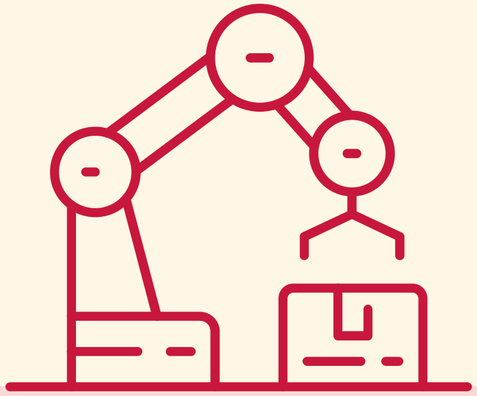

BONITO *Bots*

AGVs and AMRs

Streamlining Warehouse Movement

- AGVs follow predetermined paths to transport goods efficiently.
- Replace manual labour, reducing human error and enhancing efficiency.

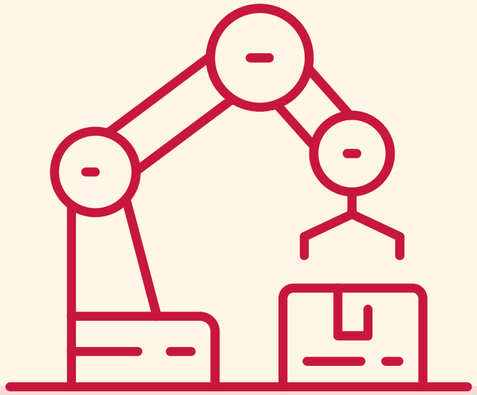

BONITO *Bots*

AGVs and AMRs

Streamlining Warehouse Movement

- AMRs navigate autonomously to-and-fro and deposit locations using sensors.
- Adapt real-time with machine learning, avoiding obstacles and optimising routes.

BONITO *Bots*

RFID

Enhancing Accuracy and Efficiency

- Identify items instantaneously
- Ensures accurate selection and precise movement of goods.

BONITO *Bots*

Automated Storage and Retrieval Systems

Maximising Space & Minimising Errors

BONITO *Bots*

ASRS

Maximizing Storage and Efficiency

- Uses vertical and horizontal carousels, robotic shuttles, and "hives" for high-density storage.
- Maximise warehouse space and improve product retrieval speed.

BENEFITS

Bonito Bots

Improves Warehouse Efficiency

- Reduce the time required to locate and pack items
- Reduce risk of human errors

Improves Manpower Utilisation and Productivity

- Assign robots to repetitive tasks such as locating items
- Allow human workers to focus on more productive activities

CHALLENGES

Bonito Bots

Higher implementation costs

- Capital investment associated with implementation of new technology
- Hiring specialists
- Training staff to operate and maintain the new systems

CHALLENGES

Bonito Bots

Scalability and flexibility concerns

- Adjusting the number of robots based on seasonal demand spikes can be challenging
- May incur additional costs

INNOVATION 2

BONITO CARE

Automated Customer Service System

BONITO *Care*

Automated Notification System

Ensures customers receive timely updates by automatically sending out notifications to them

BONITO *Care*

Shipping company issues scheduling delay

ANS is triggered when shipping delay occurs

ANS sends notification to customer immediately on shipping schedule

Relays information to customer without manual input

Delays resolved and order is shipped out

Shipping comapny successfully ships out the order to customer

ANS notifies customer on updated shipping schedule

ANS sends out notification to customer for each update, e..g. leaves sorting center, enroute to address etc.

BONITO *Care*

Automated Notification System

Enhancing Customer Communication with Automated Notifications

- ANS(Automated Notification System) instantly inform customers about their order status and delays.
- Enhances operational efficiency, reducing customer support inquiries.
- Improve transparency and customer satisfaction by providing real-time updates without manual input.

BONITO *Care*

Automated Refund System

Automatically handles refunds based on pre-defined business rules without the need for human input

BONITO Care

Customer requests for refund

Customer sends a refund request through the ARS, available on the site.

ARS processes refund based on business rules defined

Pre-defined business rules set by company on what is acceptable for refund

Approves/Rejects customer's request

If approved, continue; if rejected, process ends and customer is notified.

Disburse refund to customer

ARS links with PPS to disburse the correct amount of refund.

BONITO Care

Automated Refund System

Quick and Hassle-Free Refunds with ARS(Automated Refund System)

- Handles refund requests without manual intervention.
- Enhances speed and consistency of refunds, ensuring a smoother, more reliable process.
- Updates the customer and the company's financial records in real time.

BENEFITS

Bonito Care

Improve efficiency

- reduce human error
- consistency and accuracy
- **68%** decrease in process processing time

BENEFITS

Bonito Care

Increases available resources and reduces costs

- redirect CSO to higher-priority cases
- maximises productivity and resource allocation

BENEFITS

Bonito Care

Improve Customer Satisfaction

- faster response time
- short processing periods
- smoother & quicker service
- builds trust & loyalty

CHALLENGES

Bonito Care

Integrating with existing infrastructure

- Compatibility issues
- Additional time and resource investment

Exception handling

- Fraudulent refund request
- Significant financial losses

CONCLUSION

65%

Reduction in human resources

69%

Reduction in Total e-commerce costs

73%

Reduction in average execution time

THANK YOU
